

save water, add comfort

This patented device uses external air mixed with water to provide a unique & pleasant shower jet experience, while optimizing water consumption

2 gpm

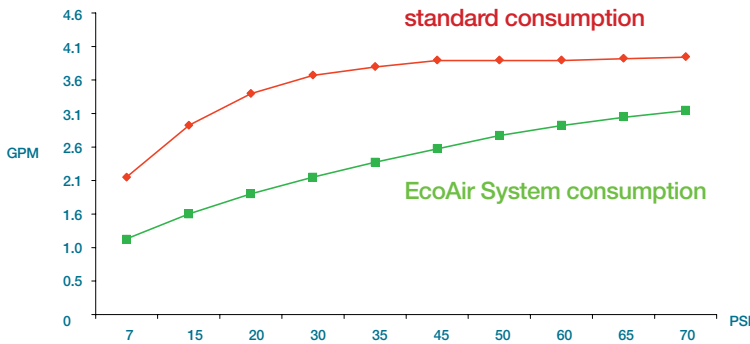

EcoAir System is available in a selection of Blu's Italian-made hand showers (TD201 & TD202) and shower heads (TE334).

With an inherent passion for water, Blu is committed to developing and offering sustainable bathware products for an ecological future.

This innovative EcoAir system provides an incredible 50% water savings by mixing water with air particles, simultaneously resulting in a comfortable water jet that promotes deep feelings of well-being.

The inner distribution system allows a complete separation of the aesthetic part of the handshower from water - decreasing consumption while performing better even at low pressure!

EcoAir technology is functional & constant on each range of pressure & flow rate, allowing a no-limit application of the system!

INNOVATION

EcoAir System turns water into a soft & invigorating rain, combining water & air in a vortex of enjoyable sensations.

COMFORT

EcoAir System increases the pleasure of taking a shower by providing a pleasant relaxing rain, while reducing water consumption.

WATER SAVING

The aim of the EcoAir System is that of preserving our climate & environment, allowing exceptional comfort with up to 50% water savings.

PERFORMANCE

EcoAir System ensures a pleasant jet even with low flow & low pressure, as the water droplets, enriched by air, become more voluminous, lighter & softer.
